NEW SENSE OF FIRE

NEW SENSE OF FIRE

Planika Fires are furnishings with fire
for today's contemporary lifestyles.

planika
NEW SENSE OF FIRE

A revolutionary concept for interior design has risen from a fresh approach to fire with the help of cutting-edge technology. Planika introduces this innovation with a touch of creativity. A mobile fire solution without smoke or smell that uses Fanola®, a liquid fuel based on ethanol, which can be arranged within different indoor as well as outdoor environments.

The unique solutions used allow Planika Fires to obtain the effect of dancing flames in their natural intense colours. Inspired by contemporary applied art and lifestyle, these features enhance the quality of life, bringing the element of fire from the past to present modern interior spaces.

Thanks to the appropriate amount of time spent on design and carefully selected materials and colours, Planika Fires, manufactured in Europe, have seen success globally in over 30 countries.

Planika is an innovative technology company set up as an Australian-European joint venture and has two international branch offices in London (UK) and New Jersey (USA).

It started with a simple bonfire in the heart of the Australian continent, under the red Ayers Rock.

Two tourists, Alfred Weilandt and Jerry Dabrowski were sitting by the fire, long into the night, listening to Aboriginal tales about a mythical Epoch of Dreams.

The atmosphere created by the flames inspired the two to find an easy way to have the same fire in contemporary interiors.

Their intention was to overcome the existing difficulties of soot, ash and the need for a chimney, all which are associated with fire in an interior space. Contemporary lifestyle demands products that through design have a character of their own but are safe and easy to use; this sparked the beginning of Planika by the founders Alfred Weilandt and Jerry Dabrowski. After spending months on designing and testing, the result was a product which combines beauty of form and comfort of use for the atavistic need to commune with fire.

This is how the idea of Planika Fires was born.

The design process of Planika Fires takes place in the Planika Studio. Success lies in designing a new form that addresses contemporary lifestyle. Design together with the technical knowledge and experience are the basis for every model. By always paying close attention to every detail while shaping the form and carefully selecting the highest quality materials, we have come up with a product that is in accordance with our sustainable agenda. We are open-minded and draw inspiration from around the world while working on the design projects.

The busy world of today is full of creative impulses that foster young talents like the designer Maciej Kluś, to express themselves through design. We are cautious not to limit ourselves and we emphasise the role of development.

Thus, it is important for us to remain open to fresh ideas as well as different perspectives, recognising the importance of individuality and personal style. Aware of the significance of diversity a new collection was created together with renowned designer Christophe Pillet.

Groundfloor

Features:

Glassfire® Technology

edges joined at the angle of 45°

tempered glass

Finish possibilities:

American black walnut

with high gloss traffic white laquer RAL 9016

or ruby red laquer RAL 3003;

Dimensions (mm):

1300 / 1300 / H 342 (520 with cylinder)

Dimensions (inch):

51,18 / 51,15 / H 13,46 (20,47 with cylinder)
